Shortage (%)	14.1	Shortage (%)	14.8

(b) and (c) Uttar Pradesh has already been allocated 296 MW power from Rihand STPS Stage-ll (2x500 MW) of NTPC and 56 MW from Dhauliganga HEP (280 MW) of NHPC which will be put into commercial operation during 2005-06. In addition, the State will also have entitlements from Dulhasti HEP (390 MW) of NHPC and Tehri HEP Stage-I (1000 MW) of THDC which are programmed for commissioning during the year 2005-06.

Use of installed capacity

†4456. SHRI RAJ MOHINDER SINGH MAJITHA. :

SHRI RAM JETHMALANI:

Will the Minister of POWER be pleased to state:

(a) whether it is a fact that on an average 74.8 per cent use of installed capacity is being made from power generation projects operated by Central Government;

(b) if not, the facts in this regard;

(c) whether it is also a fact that use of installed capacity in many of these projects is not as per commercial norms;

(d) if so, the names of the projects generating power less than 70 per cent of their installed capacity;

(e) whether power generation can be increased by improving the projects having lesser generation capacity; and

(f) if so, to what extent?

THE MINISTER OF POWER (SHRI P.M. SAYEED): (a) and (b) During the year 2004-05, the average Plant Load Factor (PLF) of thermal power stations (all sectors) in the country was 74.8%. The PLF of central sector power stations was **81.7**%. The sector-wise PLF for2004-05 is given below:—

† Original notice of the question was received in Hindi.

Sector	Type	PLF(%)
Central	Thermal	81.7
	Nuclear	70.7
State	Thermal	69.6
Private	Thermal	85.2
Alt India	Thermal	74.8
	Nuclear	70.7

While the capacity utilization of hydro power projects depends on the water inflows/reservoir level, the capacity utilization of gas/liquid based power projects depends on the availability of gas as well as requistion of States from such power projects.

(c) and (d) Details of the thermal and nuclear power stations which are operating below 70%. PLF during 2004-05 are given in the Statement (See below).

(e) and (f) Government of India have identified 106 old thermal units having capacity of 10413 MW for Life Extension (LE) works during the 10th Plan at an estimated cost of Rs. 9200.00 Crores. After implementation of the LE Schemes, the economical life of the units would get extended by another 15-20 years and the generating capacity would increase to 10747 MW besides overall improvement in the performance of the units. In addition, 57 thermal units having capacity of 14270 MW, which are comparatively new unis and are performing well, have also been identified for Renovation & Modernisation (R&M) works to sustain their performance at an estimated cost of Rs. 977.00 Crores.

Government of India have also identified a programme to renovate 62 existing hydroelectric power projects having installed capacity of 9977.5 MW for implementation during the 10th Plan at an estimated cost of Rs. 2227.062 Crores. After implementation of the programme, a benefit in the form of 1516 31 MW would accrue.

Statement

Details of the thermal and nuclear power stations which are operating below 70% PLF during 2004-05
